From Booklist

In this scholarly, extensively documented volume, Traer brings the discipline of ethics to our current environmental crisis. He explores how governments, corporations, and citizens can work together to address environmental problems by reducing air and water pollution, transforming industrial agriculture, preserving endangered species, promoting urban ecology, and ending global warming—all policies that value biodiversity — and by supporting laws that regulate our use of finite natural resources. Environmental ethics took off, he says, in the 1970s, and “doing” ethics remains “a way of trying to clarify our moral reasoning” regarding our treatment of the planet by showing how patterns of ethical reasoning are derived from philosophical traditions of what is “right.” Our first goal, Traer maintains, is to achieve an environmentally sustainable economy by limiting the adverse impact of that economy on the environment. Traer manages a unique blend of the philosophical with the pragmatic, ending with a discussion of 15 strategies using existing technology that would prevent a global warming disaster within 50 years. --Deborah Donovan

Review

Praise from the Previous Edition:

"In this well-done, three-part work, Traer offers a solid introduction to environmental ethics. ... Traer presents opposing views fairly, and is good at explaining/applying concepts. Recommended."

—Choice

"In the hands of Traer 'environmental ethics' become the critical search for wisdom for individuals and for society in dealing with the greatest crisis in human history. It includes, and draws from, the whole range of formal ethical systems, but it also treats specific environmental problems such as global warming. It shows how these cannot be separated from economic and political theory and practice. And it does all this in relation to our actual historical situation and cultural diversity. This is "ethics" at its transdisciplinary best."

—John B. Cobb, Jr., Claremont School of Theology

DOING ENVIRONMENTAL ETHICS BY ROBERT TRAER PDF

Doing Environmental Ethics faces our ecological crisis by drawing on environmental science, economic theory, international law, and religious teachings, as well as philosophical arguments. It engages students in constructing ethical presumptions based on arguments for duty, character, relationships, and rights, and then tests these moral presumptions by predicting the likely consequences of acting on them. Students apply what they learn to policy issues discussed in the final part of the book: sustainable consumption, environmental policy, clean air and water, agriculture, managing public lands, urban ecology, and climate change. Questions after each chapter and a worksheet aid readers in deciding how to live more responsibly.

The second edition has been updated to reflect the latest developments in environmental ethics, including sustainable practices of corporations, environmental NGO actions, and rainforest certification programs. This edition also gives greater emphasis to environmental justice, Rawls, and ecofeminism. Revised study questions concern application and analysis, and new “Decisions” inserts invite students to analyze evaluate current environmental issues.

Very Interesting!

By Claire

As a student in Environmental Ethics class, this book has been essential in sparking very interesting debates among students. I am especially interested in Chapter 3: Ethics and Economics, and the section on Green Economics. I really think that this book could be useful for everyone to read. It is well-written and easy to follow. Dr. Traer brings up some extremely relevant points that deserve to be recognized and discussed.
