I have reviewed a number of books on pain-and read many more. This book strikes me as a resume for the editors and the article authors-but it doesnt strike me as a sincere effort to help those with fibromyalgia. It provides only the usual superficial treatment by those with a medicocentric viewpoint- despite having chapters on lifestlye and nutrition-for it is clear the authors believe that fibrmyalgia is essentially characterized by pathophysiology. Interestingly enough- even the definiton of fibromyalgia has changed since the authors wrote this book- for now it is believed fibromyalgia is not a musculoskeletal problem- but a neurocentric problem- faulty brain processing.

Needless to say this book is written for people in medicne- and not for people with fibromyalgia. The authors epistemic community doesnt brook any doubt as to the soundness of their approach- and this is seen thruout the book. My guess is the chapter authors and the editors havent done much exploring beyond the medicocentric reductionistic, modernistic paradigm,

So if your a tru believer in medicine- then this book offers a cursory review of medical approach to fibromyalgia. If you really care about people with fibromyalgia- this book is of questionable value.
