Essentially a cut and paste of others' work with exercises - not a classroom textbook

By Bomb

I am taking an Introduction to Sociology class as part of a required course for my Computer Science degree. This text book is used in the course. The book does not address specific audiences, so I would assume it is written for audience without any sociology background.

Although the authors of this book write some of the chapters, the majority of the book consists of other researchers' paper or articles regarding each chapter's topic. This makes the style of writing in the book inconsistent and hard to follow.

The book does not come with glossary. Some of the vocabularies are introduced in the prior chapters, but I often find myself lost of context because of the jargon used in this book.

The exercises or workbook activities are confusing sometimes. For example, one of the question asked "According to John Dewey, is man defined by his environment or does his environment define man?" This question can definitely use a better wording.

I would avoid this book, if it is not required.
